*salon & day spa*

## Pre-Peel Advisements

- Smoking, outdoor exposure, tanning beds, excessive alcohol consumption, poor nutritional intake, and/or recreational use of controlled substances, will effect and diminish the effectiveness and result of the peel treatment.
- Be aware there are some risks associated with CosMedix Peels: Redness and swelling, Acne breakout, itching or irritation, skin peeling or flaking up to 14 days post-peel, scarring, hyperpigmentation, and hypopigmentation.
- Must refrain from excessive sun exposure or the use of a tanning bed while undergoing treatment and during the 14 days following the end of treatment. A minimum of 15 SPF is mandatory.
- Not a candidate if you exhibit any of the following: Allergic to aspirin or any salicylic sensitivity, inflammation/sunburn/severe dehydration, active Herpes virus (cold sores), broken skin, peels within 8 weeks unless otherwise advised, use of Accutane within the past 12-months, use of glycolic acid products, Retin-A or Renova in the last 4 weeks, use of an antibiotic in the past two weeks.
